

Installation of Tenax Turf Reinforcement at Hayfields Golf Course for PGA Champions Tour Tournament

LOCATION:	Hayfields Golf Course, Maryland, USA
PRODUCT:	Turf Reinforcement (TR) Mesh
PROJECT:	Installation of reinforcement mesh for temporary overspill car parking needs

THE PROBLEM

As host to one of the PGA TOUR's which features the world's premier golfers age 50 and up, Hayfield's Golf Course knew that it would need to prepare overspill parking spaces to accommodate the sold out attendance for the star studded Constellation Energy Classic golf tournament.

THE SOLUTION

Tenax Turf Reinforcement mesh was installed to give protection from wheel rutting and grass root damage to areas designated for overspill parking.

CONCLUSION

The tournament, which was covered by the Golf Channel, was a huge success. Parking was not an issue, and after the tournament's seven days of in-and-out parking of cars, pick-up trucks, vans, and golf-carts on the grass, the Tenax TR mesh delivered it's promises of protecting the grass and preventing wheel rutting.
